this book presents approaches to address key challenges based on a vehicle level view and with a special emphasis on drive by wire systems the design and testing of modern vehicle electronics are becoming more and more demanding due to increasing interdependencies among

components and the safety criticality of tasks the development towards drive by wire functionalities in vehicles with multiple actuators for vehicle control further increases the challenge the book explicitly takes into account the interactions between components and aims at bridging the gap between the need to generate additional customer benefits and the effort to achieve functional safety the book follows a twofold approach on the one side it presents a toolchain to support efficient further development of novel functionalities for drive by wire vehicles the toolchain comprises appropriate software tools and scaled and full scale experimental vehicles on the other side development towards functionally safe and flexible drive by wire vehicles is addressed by proposing a top down designed architecture for vehicle electronics that is enabled by suitable mechanisms the resulting goal achievement with regard to functional safety is evaluated based on a novel hierarchical approach
